

# Ensemble Ramachandran plots DHR8C\_R3Cons\_em\_bcr3 (20 models)\*\*

cv = Circular Variance (low values signify high clustering of the data points). \* Accessible ☺ Buried  
 Gf = Average G-factor for the residue (the higher the value the more favourable the conformations) based on analysis of high-res. Xstal structures  
 Data points coloured according to G-factor: Favourable Unfavourable
